KGV series are intended for grab-n-go, beverage and produce, are type 1 equipment -75°F/55%RH.

S

Temperature of the KGV-MD/MR is set for 32°F and the KGV-MO is set for 36°F.

All shelves of the KGV series have a 31 lb/ft² loading limit.

Model	Dimensions (LxDxH in inches)	Service dimension: (LxDxH in inches)	Volume (ft³)
KGV-MD-2-S(R)	51 ² %4'' x 32 ⁶ %4'' x 87¾''	51 ² %4'' x 56 ⁵ %4'' x 87¾''	37,63

2 Getting started with your KGV series

2.1 Location

To your new equipment perform well please respect the following warnings:

This is type 1 equipment, intended to work with 75°F / 55%RH.

This equipment is intended for maintaining temperature only.

Be sure products are not ambient temperature (must be cold).

This equipment must be located in an indoor environment.

Check for airdrafts and avoid them.

Air movement from ac units shouldn't be directed to the equipment.

The equipment must not be directly or indirectly exposed to the sun.

Check for rejected heat from another refrigeration units and avoid that.

Place the equipment in a levelled floor.

Do not obstruct the air way in front of the condenser.

Make sure there is a drain preparation (remotes only).

Models to be posittioned against a wall keep a safe distance of $2^{3}/8^{11}$.

After servicing always close the doors.

This equipment should be handled by a qualified technician.

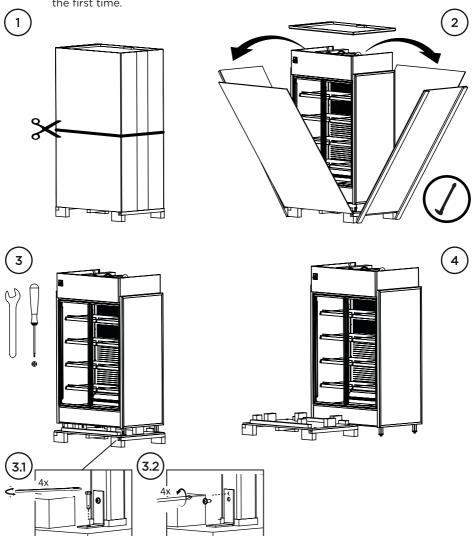

2.2 Uncrating

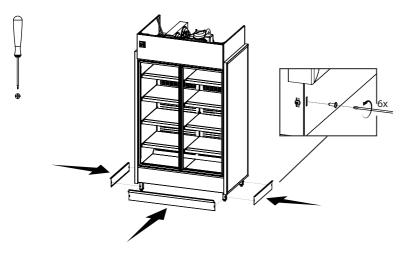

All operations must be done carefully.

All plastic protective films must be removed before using the equipment for the first time.

2.2.1 Bottom panels assembly

2.3 Check for damage

At the end of production HYDRA KOOL products are carefully inspected. No damaged units are sent out.

HYDRA KOOL doesn't take responsibility for damage between factory and client.

Possible damage on the unit must be checked to file a claim near the transportation company.

The unit must be checked in the following points:

Exterior panels

Doors

Shelves

Glasses

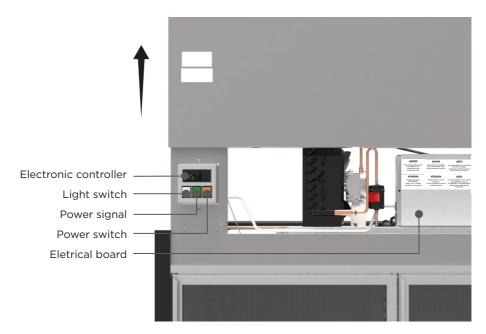

Paint job

Door handles

Top structure

2.4 Control panel and main features

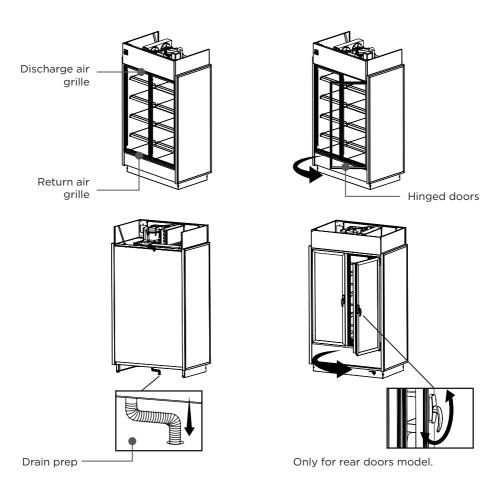

The pictures below, show the main features and all necessary controls.

Self contained control panel

Remote control panel

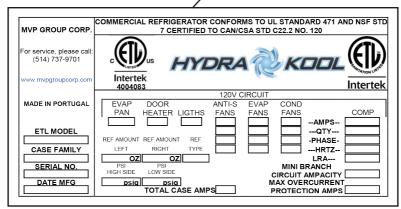

2.5 Check serial, model numbers and requested options

Before start your equipment, check the serial number, model numbers and requested options.

This inspection should be made visually in the following items:

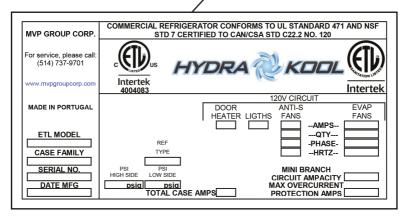

Self contained name plate

Remote name plate

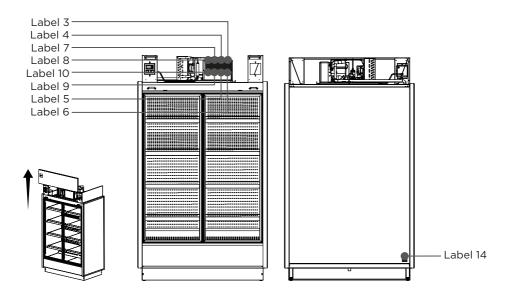

2.6 Warning/Caution labels

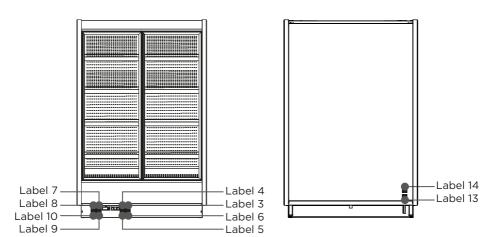

Before starting, HYDRA KOOL products have caution and warning labels to be respected.

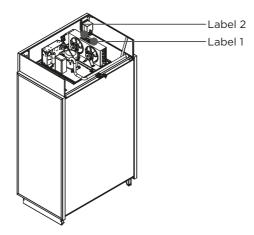

Self contained labels

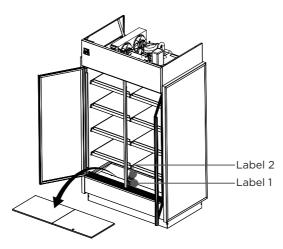

Remote labels

Condenser labels

Self contained and remote labels (evaporator). See 5.7 chapter (instructions to get to the evaporator).

SOB PRESSÃO DE AZOTO
ATTENTION EQUIPEMENT
SOUS PRESSION D'AZOTE
CAUTION EQUIPMENT
UNDER NITROGEN PRESSURE

- This appliance requires a properly grounded dedicated circuit using a NEMA rated wall receptacle do not remove the grounding prong on the plug or the risk of an injury due to shock from the ungrounded electrical service may occur.

Warning

- This product can expose an individual to chemicals that have been identified by the state of California to possibly be dangerous leading to various diseases birth defects or other human reproductive system harm. For more information go to www.p65warnings.ca.gov.

2.7 Check your electrical installation

This equipment is intended to be connected to an outlet with 115V/ $60\mathrm{Hz}/1$ phase.

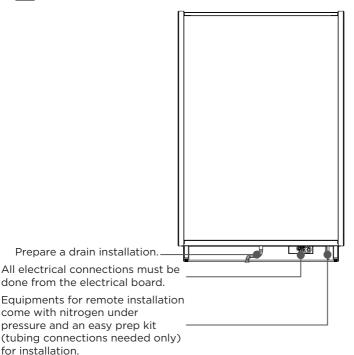

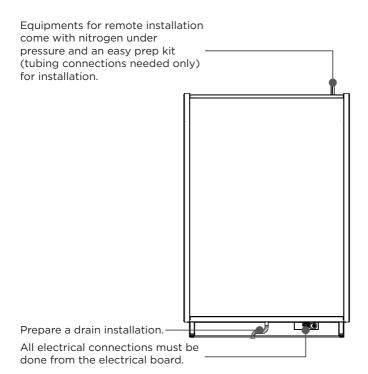

Nema-5-15P

2.8 Electrical, drain and refrigeration connections (remote only)

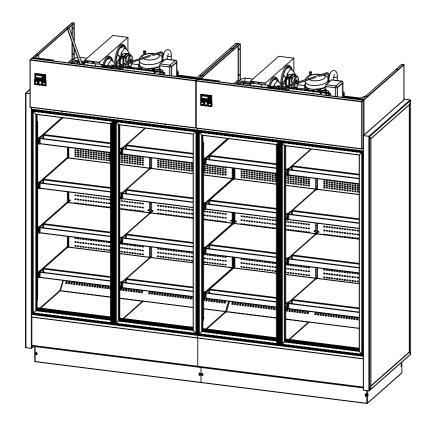

Installation and service must be performed by a professional technician

2.9 Joining

For joining follow the steps described.

3x - DIN933 M6x80

5x - DIN933 M6x20

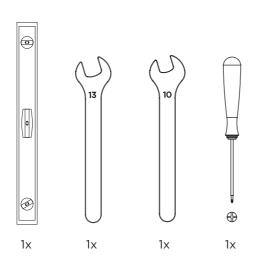

12x- DIN9021 M6

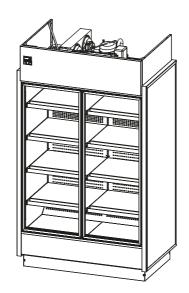

6x - DIN934 M6

2X FIT00201301 (3441/2")

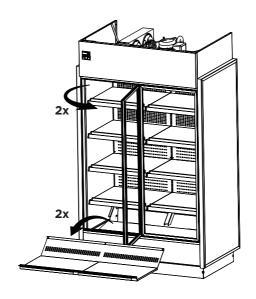

2x KGV-MD/MR

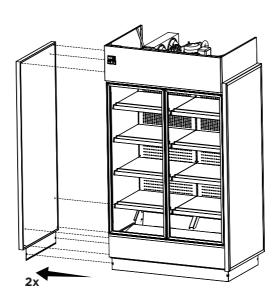

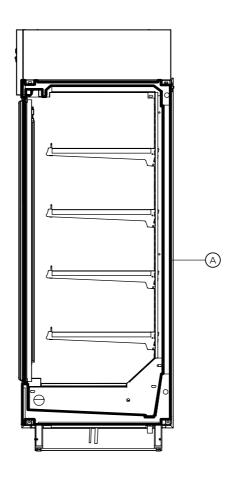

KIT0003U01000

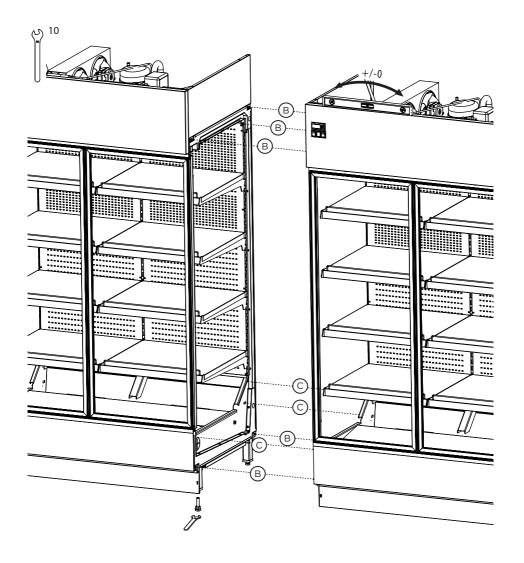

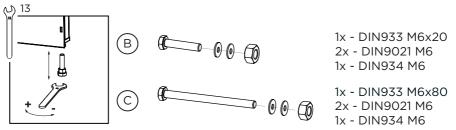

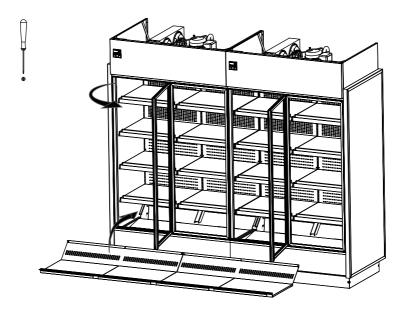

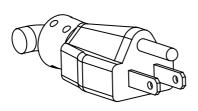

2.10 Plugging and start

To start your equipment follow the steps:

- 1 Check for page with parameters inside the manual.
- 2 After uncrating and placed the equipment respecting all warnings set in 2.1 chapter, and all switches are set to off position, connect the equipment.

Make sure you have the correct outlet!

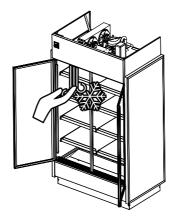

- Nema-5-15P
- ${\bf 3}$ Check lights, using button referenced on chapter 2.4 If not working consult the maintenance chapter.
- 4 Turn ON power button referenced in 2.4 chapter.

Noise will be heard when compressor starts! If compressor doesn't start, call a technician!

5 - Open the door and check for air movement in the discharge air grille.

- 7 Before loading, leave the equipment working for about 30 min.
- 8 Load your KGV-Series.

Loading must be done respecting loading limits and weight per square foot mentioned in chapter 1.1.

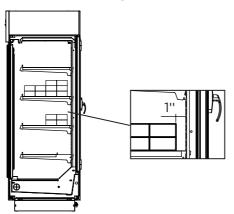

This equipment is intended for maintaining temperature, be sure the products are cold, and not ambient temperature.

After loading check for any obstruction in the discharge and return air grilles.

Maintain doors closed after servicing.

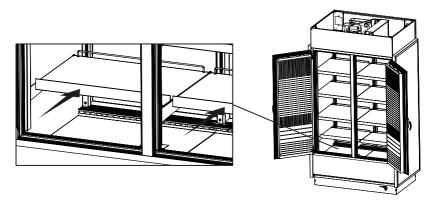

Respect 1" distance to the back.

To load the KGV-MR series, deck, push the shelf forward.

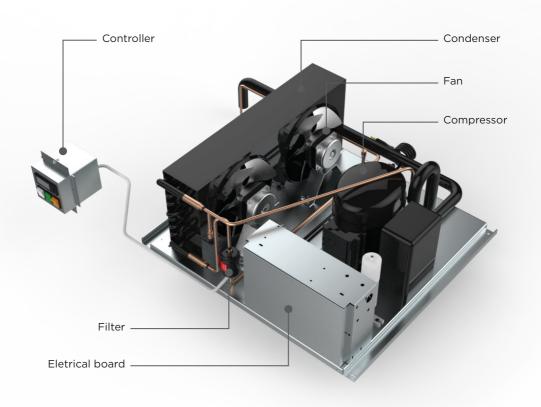

9 - If any problem encountered, see troubleshooting or call a technician!

3 Refrigeration

3.1 Self contained refrigeration equipment and defrost

The refrigeration equipment it's laid out in the top of the equipment.

Model	Gircuit pressure	_ow side	Refrigerant and charge (OZ)	Defrost
KGV-MD/MR-2-S(R)	331	174	R 404A 16,2	Automatic 2/day
KGV-MD/MR-2-S(R)	331	174	R 404A 24,7	Automatic 2/day

3.2 Refrigeration loads (remotes only)

Installation of remote equipment must be done by a qualified technician.

Model	BTU*/h	Expansion valve type	
KGV-MD/MR-2-R	3445	TS2	00
KGV-MD/MR-3-R	4430	TS2	00
KGV-MO-50-R	10458	TS2	00
KGV-MO-80-R	15542	TS2	00

^{*}values presented are indicative for 14°F evap, and 90°F ambient

4 Electrical

4.1 Electrical specifications data

Electrical data can be found on the marking plate.

Standard equipment include led lighting in all shelves and top, and anti sweat heaters.

115V/60Hz/1 phase-self contained amps

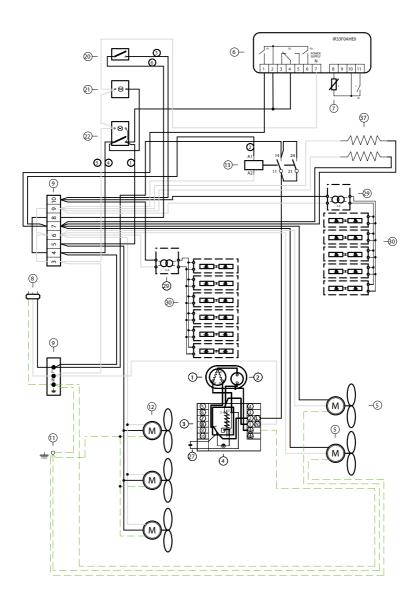

Model	Compressor F.L.A./L.R.A.	Lights (all shelves and top)	Asans	CND	Anti sweat heaters	Total amps (self contained)
KGV-MD-2-S	9,6/49	0,35	0,7	0,9	0,38	11,93
KGV-MD-3-S	8,9/47	0,54	1,05	0,9	0,6	11,99

5 Maintenance

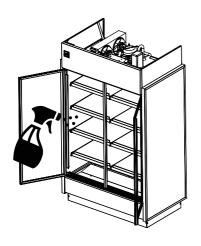

5.1 Cleaning

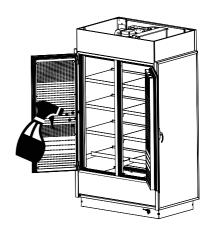

All operations must be done with the unit disconnected.

Clean surfaces (glass/metal/plastic) with soft detergents or warm water. Do not use abrasive cleanser.

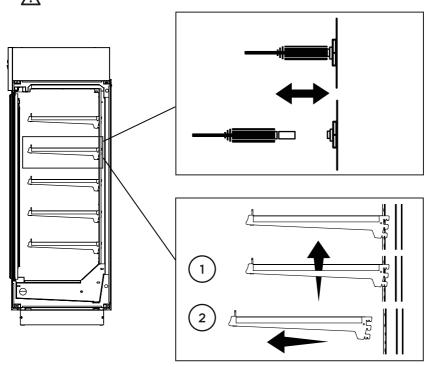

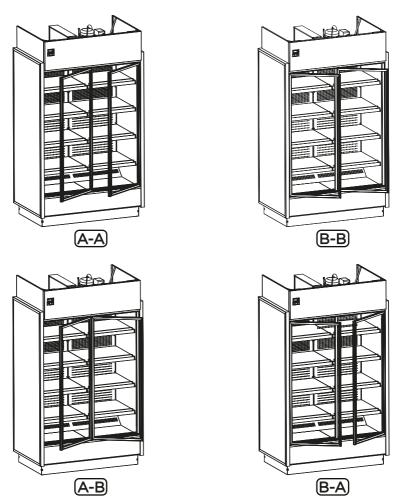

5.2 Shelf removing/adjustment

All operations must be done with the unit disconnected.

5.3 Front doors handling 5.3.1 Doors positions

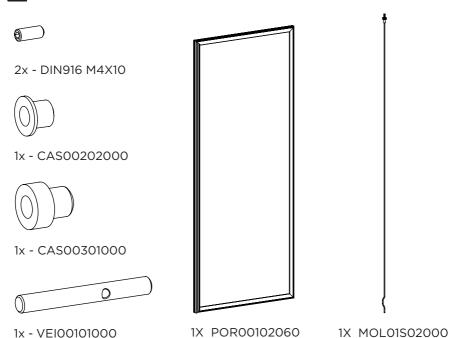

5.4 Door installation

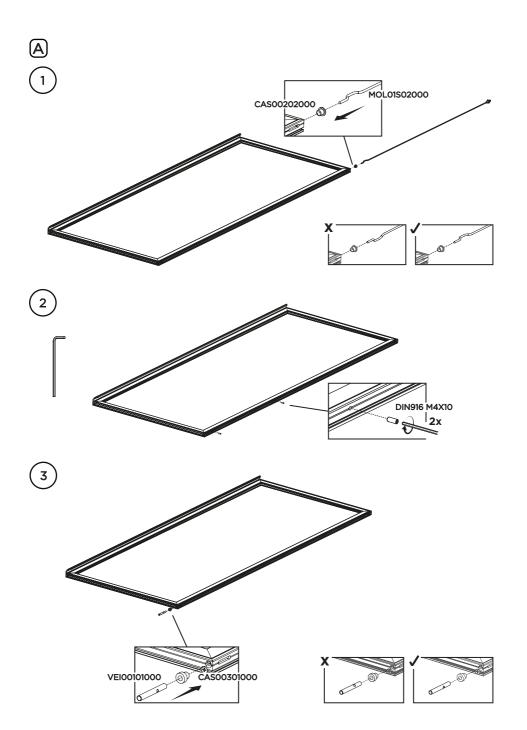

All operations must be done with the unit disconnected.

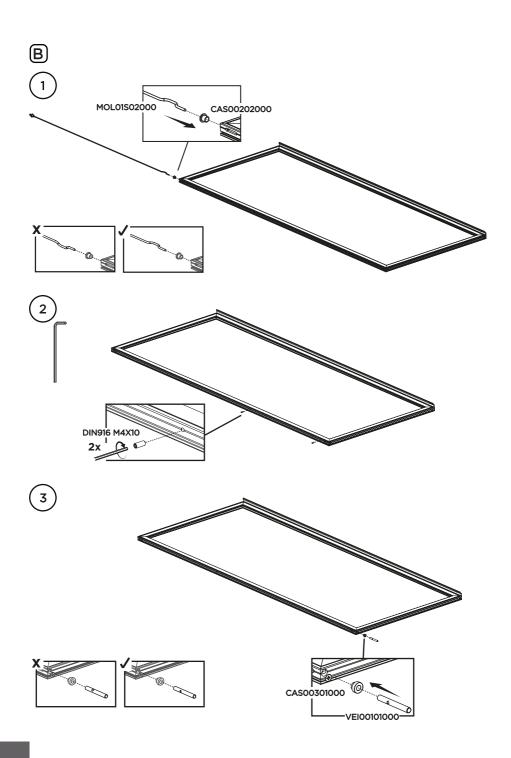

All operations must be done carefully.

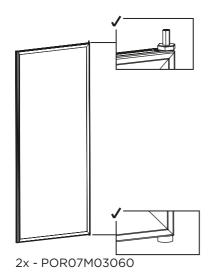

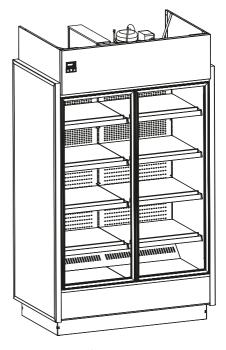

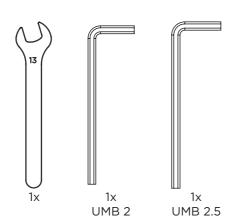

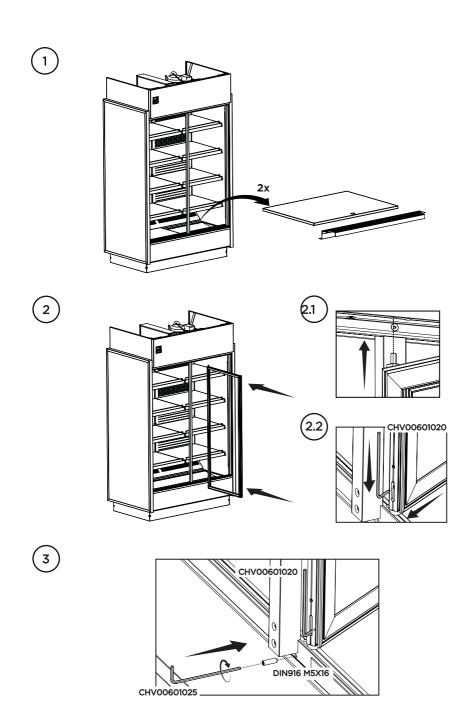

2x - DIN916 M5X16

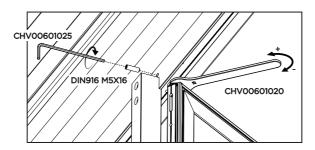

1x - KGV-MD/MR-X-S(R)

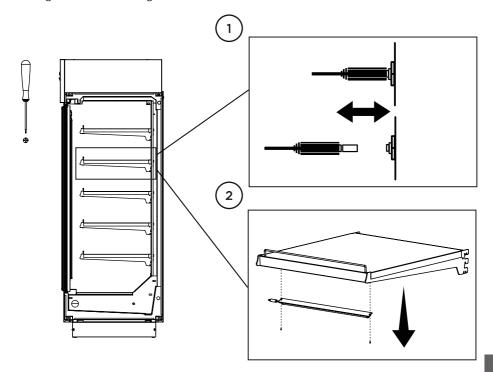

5.5 Light substitution

To replace lights follow the steps:

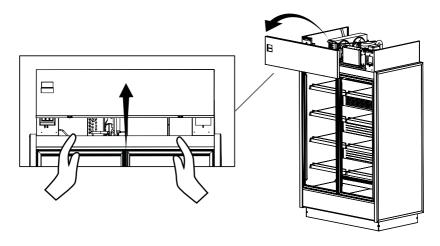

All operations must be done with the unit disconnected.

- Disconnect the light
- Unscrew the light and remove the light
- Insert a new light in the same place of the old one
- Screw the light and connect it
- Plug and turn on the light

5.6 Panel removal

5.7 Condenser cleaning

 \triangle

This operation must be performed by a qualified technician.

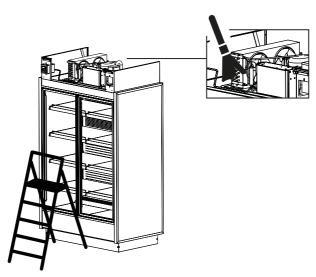

All operations must be done with the unit disconnected.

Condenser must be regularly cleaned (every month). Use a brush or vacuum it. To get to the condensator must remove frontal panel.

It is recommended a ladder to perform condenser cleaning.

5.8 Evaporator cleaning

 \triangle

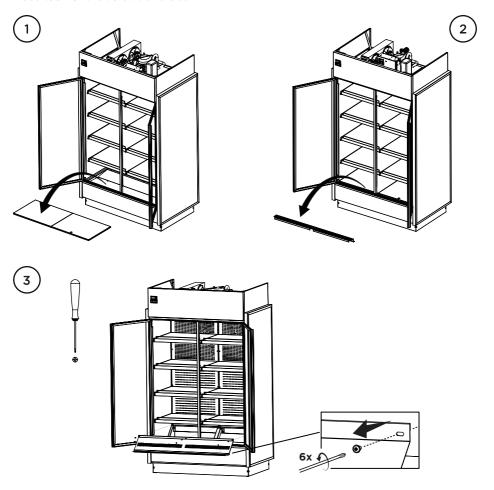

This operation must be performed by a qualified technician.

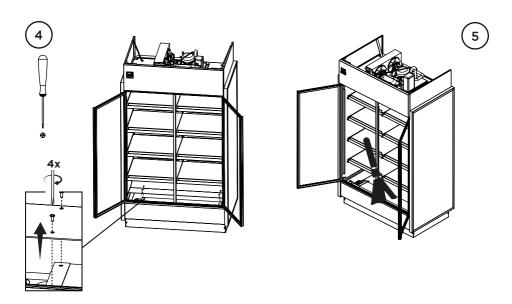

All operations must be done with the unit disconnected.

To access the evaporator:

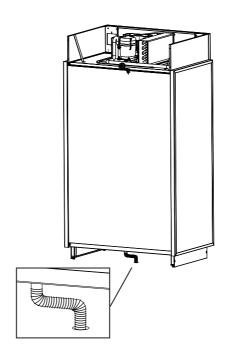

- Open your unit
- Lift and remove exposition panels
- Remove return air grille
- Use tool for the screws and clean

5.9 Drain inspection

↑ Check for drain obstruction and correct position every month.

6 Troubleshooting/Service

6.1 Troubleshooting

This operation must be performed by a qualified technician.

Doors not closing:

Check for leveled floor.

Check for obstruction.

Remove doors and check the bearings.

Lights not working:

Check light switch position.

Check light connections.

Warm case temperature:

Check for air return grille obstruction.

Check for air drafts.

Check store temperature.

Check for condenser obstruction and cleaning.

Check for frozen evaporator.

Check set point.

Display area is over filled.

Check proper door sealing.

Fans not working:

Check electrical connections.

Check for any debris.

Case not aligning:

Check for leveled floor.

Check instructions for joining.

Display not working:

Check main power switch position..

Check electrical connections.

Compressor not starting:

Disconnect switch open.

Blown fuse.

Overload protective tripped.

Low charge of refrigerant.

Relay defective.

Equipment runs constantly:

Condenser dirty.

Condenser fan malfunction.

Temperature and relative humidity too high.

Starting relay burns out:

Low voltage.

High voltage.

Compressor short cycles.

Incorrect running capacitor.

Incorrect relay.

Head pressure too high:

Unit overcharged.

Air or other non condensable gases in the system.

Clogged condenser.

Defective condenser fan motor.

Unit location too hot.

Restriction in charge line.

Head pressure too low:

Insufficient refrigerant charge.

Leak in the system.

Cold location.

Noisy unit:

Compressor oil charge low.

Fan blade causing vibrations.

Tube rattle.

Loose parts.

Case not leveled.

6.2 Service

This operation must be performed by a qualified technician.

For spare parts, contact your distributor.

Service by	Type of action	Date	Serial number and model

7 Warranty

12 months warranty for all parts and labour from the invoice date. A new part will be provided free of charge. Defective part must be returned to the manufacturer.

Warranty claims: All claims must include model number, serial number, date of purchase, date of installation and additional information about the supposed defect.

All service work must be authorized by MVP group.
